

Release Notes

xMid Version 24.15

Content

1. General.....	2
2. Administration.....	2
3. xArc.....	2
4. Accounting.....	3
Legend.....	3

1. General

Description
<p>Extension: Sabre interface > NDC bookings</p> <p>The Sabre interface has been adapted and extended so that NDC bookings can also be successfully parsed and imported.</p>
<p>Extension: Extended order search > lists > flights</p> <p>The flight list has been optimized. Calling up the results is now much faster.</p>

2. Administration

Description
<p>Bugfix: administration > price rules > employee commission</p> <p>Existing price rules for calculating employee commission could previously be deleted, even if they were part of active payrolls. Improvements have been made in this area so that only price rules that are not in use can be deleted. A corresponding message “Error: Rule in use” has been added.</p>
<p>Bugfix: placeholder „collection/ advice overview“</p> <p>The calculation of the due amount in the placeholder “collection” / “advice overview” has been adjusted. Only the amounts due up to <today> are now shown.</p>

3. xArc

Description
<p>Bugfix: special characters in barcodes</p> <p>If the barcode contained a special character, the tab with the open invoice could no longer be closed. This is now possible.</p>

4. Accounting

Description
<p>Extension: Upload of CAMT-format camt.05x.001.08</p> <p>Previously, it was only possible to upload the camt.05x.001.02 format. As not all banks offer this format any more, it is now also possible to upload the CAMT format camt.05x.001.08.</p>
<p>Extension: Search in SPI</p> <p>The “itinerary ID” field is no longer case sensitive in the supplier import. This means: regardless of whether you search with lower and/or upper case letters, the matching order will be found.</p>

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
