

Release Notes

xMid Version 23.03

The most important changes in the new version:

Bookings via the HMR booking mask in xMid now receive the order numbers in the new HMR format.

The 3LC "NUM" and "VAV" are now available.

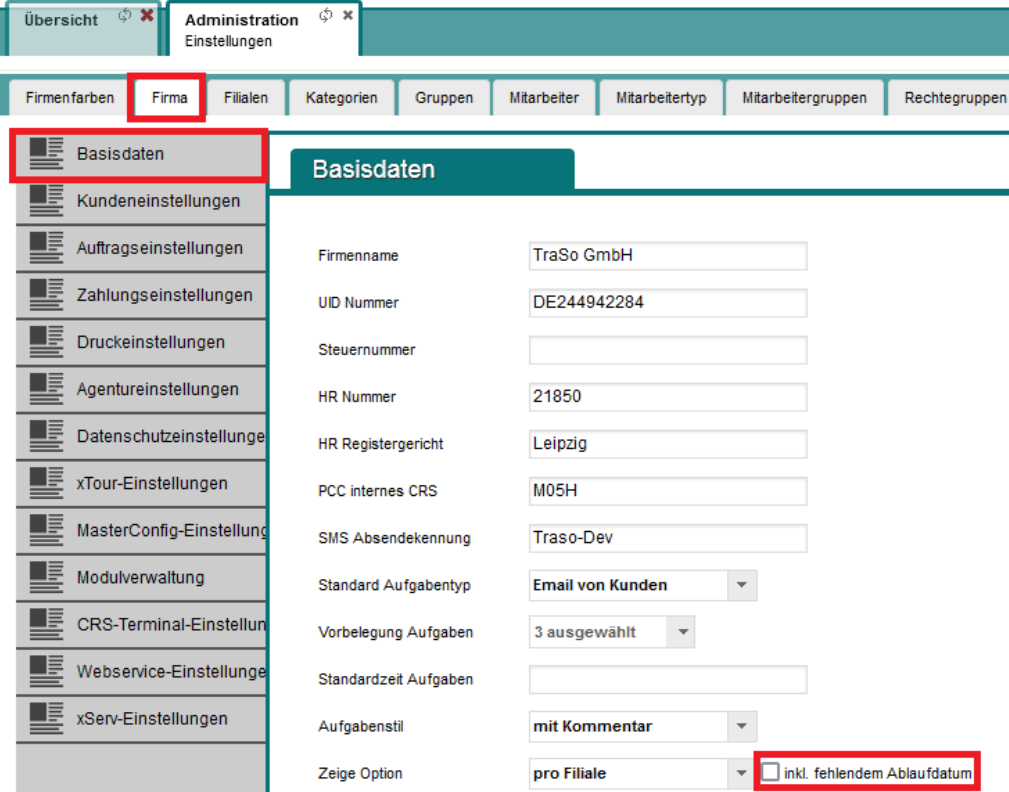

The option management at login now also supports the editing of options without expiration date.

1. In General

Typ	Description
Extension XMID-1770	HMR Insurance: Booking with new transaction numbers The connection to the sales channel of HMR now supports the new format of transaction numbers. These are no longer 9-digit as before, but 15-digit and can also contain letters.
Extension XMID-1826	New check for automatic document jobs An additional check has been added to the automatic document dispatch for complex vouchers. There is now a check whether the mail has a correct attachment. This prevents the customer from receiving a mail without the complex voucher in the attachment. If there is no attachment, an automatic task of the type "send document error" (validation rules) is stored in the order, so that the voucher dispatch must take place manually.
Bugfix XMID-1847	NEO import: Incomplete import In the past it happened that NEO bookings were not imported completely. Bug fixes have been made and the import has been adjusted.
Extension XMID-1896	New airlines MBU and 4M The list of airlines has been extended by MBU (Marabu Airlines) and 4M (Mavi Gök Airlines).
Extension XMID-1921 XMID-1953	New 3LC NUM and VAV The 3-Letter Codes NUM (Neom Bay Airport) and VAV (Lupepau'u International Airport) have been added.

<p>Extension XMID-1913</p>	<p>Extension of the option management at login</p> <p>Up to now, only options with an expiration date could be managed via the option management. This date is supplied by the corresponding CRS system.</p> <p>However, the date is not always supplied. As a result, options are created without a valid expiration date. In order to be able to manage these options as well, the new option (Administration > Settings > Company > Basic data) "incl. without expiration date" has been added. If this option is active, the options that do not have an expiration date will also be displayed when logging in. This means that it is now possible to conveniently edit options that were delivered without an expiration date or were created manually.</p> 
<p>Bugfix XMID-1922</p>	<p>Shop Holidays customer search: Transfer of customer data</p> <p>The transfer of customer data from xMid to the Shop Holidays mask was disturbed. This has been fixed. The search works as usual.</p>
<p>Bugfix XMID-1933</p>	<p>Iris Plus Import</p> <p>The import of Iris Plus bookings has been adjusted. The birth dates of the participants are transferred to the order.</p>

<p>Extension XMID-1907</p>	<p>xArc (archiving at Travelbasys)</p> <p>The export of a general receipts to Travelbasys has been adjusted. In the field "Customer/Supplier" the creditor is sent, if this was selected in the dialog of the intermediate receipt storage.</p> <p>In addition, in the field "Receipt type" no number is transferred anymore, but the abbreviation GS = credit note and RG = invoice.</p> <p>Both fields are predefined search criteria in xSuite.</p> <div data-bbox="427 573 1439 741" style="border: 1px solid #ccc; padding: 5px; background-color: #f9f9f9;"> <p style="text-align: center; color: #a00; font-weight: bold;">Auszug aus dem xSuite</p> <p> <input type="checkbox"/> 9988_2365 Kunde: Kreditor HOT Belegdatum: 20.02.2023 Belegart: GS Barcode: 30040000000242 CreateTime: 20.02.2023 </p> </div>
<p>Extension XMID-1915</p>	<p>New countries in the regions table</p> <p>The country of St. Vincent and the Grenadines has been added to the countries table and is now available.</p>

2. Administration

Typ	Description
<p>Bugfix XMID-1819</p>	<p>Prioritization of text modules:</p> <p>If a payment type was stored for a textmodule under administration > common rules > Textmodules, the specified prioritization did not work. Until now, text modules with a payment type were always displayed at the top, regardless of the priority. This has been adjusted. The text modules are displayed according to their priority.</p>

3. Order

Typ	Description
<p>Bugfix XMID-1881</p>	<p>Changing the collection form when the service is blocked</p> <p>The collection form could be changed via the buttons "A" or "D" in the order despite blocked price lines. This is no longer possible.</p>

4. Accounting

Typ	Description
Extension XMID-1687	<p>Single margin accounting</p> <p>In order to simplify the single margin accounting for travel agencies with own tour operation, a possibility has been created in the supplier invoicing to display only those transactions that are relevant for the margin accounting. Conversely, agency trips are not displayed in this way.</p> <p>For detailed questions on this topic, please contact support.</p>
Bugfix XMID-1814	<p>Missing recognition of TUI commission</p> <p>In the past, commission services to be posted manually were often not displayed in the import. These items will be displayed in the future and can then be imported and edited.</p>

5. xTour

Typ	Description
Extension XMID-1425	Price entry of xCircle and xGroup In the price entry area of xCircle and xGroup a message has been added when trying to save an empty price field. This is to prevent errors when entering round trips and to remind the user to enter a price. If you confirm the message that you want to save it anyway, the price field can remain empty.
Bugfix XMID-1894	xCircle and xGroup: RQ in release time When booking xCircle and xGroup products an error was fixed. If a product had the attribute "RQ in release time", but the release time was not yet reached, the product was only bookable on request. This error has been fixed. If the release time has not yet been reached, the product is displayed as bookable. Only when at least one service has exceeded the release time and the checkbox "RQ in release time" is active, the entire product is only bookable on request.
Bugfix XMID-1947	xCircle/xGroup booking: Missing contingent after cancellation It was sometimes not possible to make a booking in xMid via xCircle or xGroup, although there was still enough contingent available. This has been fixed and bookings are possible again. Contingents are correctly deducted or returned in case of cancellation.

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
