1. General

description
<p>extension: Advanced order search > Services</p> <p>The services section of the advanced order search has been optimized so that sorting, filtering and searching leads to faster results.</p>
<p>extension: New placeholders</p> <p>In the General Rules - E-Mail Texts and Text Modules section, there are two new placeholders: "Contact First Name" and "Contact Last Name". These can be used to send an email from an order in which you want to refer to the customer's latest contact.</p> <p>Example: Max Miller works at the company Sunshine. The company is linked to Max as a contact. The employer should also be listed in an invoice to Max. Note: If the customer has multiple contacts, the contact that was last generated is always listed</p>
<p>bugfix: Creation of multiple CRS in employee profile</p> <p>Under Administration > Settings > Employees, multiple CRS can be created again.</p>
<p>bugfix: Settlement of employee bonuses</p> <p>It was no longer possible to settle the employee bonus. The error has been fixed and the employee bonus can be settled again.</p>

2. accounting

description
<p>extension: Creditor payment run</p> <p>New option for collective transfer:</p> <p>A new option has been developed for the creditor payment run that allows several transfers to the same service provider to be combined into one payment. The option “Collective transfer” has been added under Settings > Company > Payment settings. If this is checked, then when the SEPA file is created, all selected payments from one service provider are combined into one payment record.</p>
<p>extension: Extension: LTA</p> <p>In the service search, orders can be searched for using the filter. If an order is selected in the results list after the search, the selection of this order is remembered, even if further services are searched for and marked in the filter search (bottom left).</p>

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
