1. General

Description
Extension: Advanced booking search > Account sheet
The account sheet area in the advanced booking search has been optimised so that sorting, filtering and searching yield faster results.

2. Order

Description
Bug: Fixing error messages in xSign
When using xSign, error messages sometimes appeared when the end customer wanted to provide a signature with a PIN. This was related to a language not being set in the customer profile. It has now been specified that the default language from the company settings (administration > settings > company > customer settings) is set in the customer profile if no other language is specified there. This resolves the issue of xSign displaying error messages.

3. xTour

Description
<p>Bug: 'book' button greyed out for request bookings</p> <p>For manual xTour bookings from an xMid order, the 'book' button was no longer greyed out for bookings in RQ. This has been fixed and as soon as an RQ identifier is stored in the quota, it will be displayed again during booking.</p>
<p>Extension: Increase in export times from xTour to xRes</p> <p>Exports from xTour to xRes have been increased to three times a day. Prices are now exported automatically at 8:00 a.m., 2:00 p.m. and, as before, at 5:20 p.m. The master data export will continue to be carried out overnight. The aim is to ensure that prices in xRes are updated more frequently and that more up-to-date prices can be exported in order to reduce price differences.</p>

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
