

Release Notes

xMid Version 25.06

Inhaltsverzeichnis

1. General.....	2
2. accounting.....	2
3. settings	2
Legend.....	3

1. General

description
<p>extension: Advanced order search > payment control</p> <p>In the payment control area, the grids for the results list, debit list, and credit list have been optimized. Among other things, the width of the comment field can be customized. The search and sort functions have been improved.</p>
<p>extension: Sabre Import: EMDs and refunds for leap years</p> <p>For Sabre Import, the logic for determining the year has been adjusted so that leap years are now also correctly taken into account for EMDs and refunds.</p>

2. accounting

description
<p>extension: Account sheets – Search</p> <p>The “only empty IDs” function in the account sheets has been optimized, as it did not always work properly.</p>
<p>extension: Leap year in evaluations</p> <p>In the accounting evaluations, February 29 of a leap year was not taken into account in the year-on-year comparison, i.e., only sales up to February 28 were reported for the previous year. From now on, February will be taken into account in full, even in leap years.</p>

3. settings

description
<p>bugfix: Error message for room type list</p> <p>When creating new room codes, no error message was displayed if the code had already been assigned. This has been fixed and an error message is now displayed for duplicate room codes.</p>
<p>bugfix: Printing - complex vouchers</p>

The placeholder SGMT_Airline was not correctly taken during printing. The error has been fixed so that the airline reappears when printing complex vouchers.

Tour operators who create their travel documents in complex voucher format can now use the “One way voucher” option in the flight templates again. Please note that the options can only be used with the 3-part letterhead.

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
