xMid Version 24.03

Content

1. General.....	2
2. Order.....	2
Legend.....	3

1. General

Description
<p>Extension: NEW INTERFACE – Rate Hawk</p> <p>A new interface to Rate Hawk is online. This makes it possible to import hotel bookings made on Rate Hawk. For questions about the setup, functionality and costs, please contact support.</p>
<p>Bugfix: Sabre Import</p> <p>An error when importing dates for bookings made at the turn of the year has been corrected for the interface to Sabre. Travel dates, ticket date and order date are read correctly again.</p>
<p>Extension: Shop Holidays – Ship names</p> <p>If ship services were delivered without a ship name, the first ship in alphabetical order was always selected from the list under Administration > Services > Ships. If the ship name was then changed manually and the booking was updated, the ship name was overwritten with the first ship from the list. From now on, the "Ship" field in the booking will remain empty if the ship booking is delivered without a name. The name is no longer overwritten when bookings are updated.</p>

2. Order

Description
<p>Bugfix: Multilingualism of document names</p> <p>If the corresponding "labels" are correctly stored and translated under administration > translation, the file name for the document type(s) in the customer's language is also taken into account for customer communication (dispatch/printing from the order and customer profile).</p>
<p>Bugfix: Copying Orders/ Services</p> <p>When copying additional services (OT), these were stored multiple times in the order copy. This has been fixed so that only those services are copied that are also present in the original order.</p>

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
