1. General

Description
<p>Extension: advanced order search > payment control > age list</p> <p>In the payment control area, the grid for the age list has been optimised. The search and sort function has been improved.</p> <p>Extension: advanced order search > reports > trip overview</p> <p>In the lists area, the grid for the trip overview has been optimised. The search and sort function has been improved.</p>
<p>Extension: refresh token for the Passolution interface</p> <p>The Passolution interface has been extended so that a new token is automatically generated when the access data expires. Logging in and out again is therefore no longer necessary, as the data is checked directly by Passolution to xMid and renewed if necessary.</p>
<p>Extension: automatic supplier mails for cancelled bookings</p> <p>In the automatic supplier mails that can be sent to a service provider from xMid, it is now also possible to automatically send bookings with the service status 'cancellation' to a supplier. The procedure is analogue to the booking, a new email template must be created for the service status 'cancellation' if the text changes to the status 'booking'.</p>
<p>Extension: renaming from Shop Holidays to Sabre Vacations</p> <p>All areas in the system that still contained the word 'Shop Holidays' have been renamed 'Sabre Vacations'. The functions behind this have not been changed.</p>

2. Accounting

Description
Extension: Expedia TAAP import > new columns & import logic Due to a change by Expedia in the Expedia TAAP import, the Excel file could no longer be uploaded to xMid. In addition, the SP-import includes the newly introduced agency service charge, for which the import logic had to be adapted. The Expedia TAAP import can now be uploaded again and the invoice and payment lines are created correctly.
