xMid Version 23.06

Content

1. In General	3
2. Administration	3
3. Order	4
4. Accounting.....	4
Legend	5

1. In General

Art	Beschreibung
Bugfix XMID-1979	Automatic sended documents It happened that e-mails sent via automatic document dispatch could not be found in the "Sent" folder. However, the sending was done correctly. This has now been fixed and automatically sent mails are also displayed in the corresponding folder of the account that has been defined in the document rule.
Extension XMID-2041	Document archive: The tab for archiving has been renamed from "Accon-Barcode" to "Barcode". This means that the name no longer depends on which type of archiving is used.
Bugfix XMID-2042	NEO: import of birthdays and age If a date of birth is sent with a booking from NEO, this is transferred to the order. If only the age is sent, this is now also displayed in the order. Only either age or date of birth can be used.

2. Administration

Art	Beschreibung
Extension XMID-2035	Print option „show commissionable price“ Previously, the total travel price of the order was displayed in the "Commissioned amount" column on the agency commission statement. From now on, the individual amount of the service is displayed in this column. This is particularly advantageous in the case of different commission rates.

3. Order

Art	Beschreibung
Bugfix	Creating manually tickets in order
XMID-2070	When creating manual tickets in the order, a double click on the Save button could lead to a ticket (or other ticket type) being created twice. In the future, this will be prevented by locking the button immediately after the first click. The button will only be available again after the process has been completed.

4. Accounting

Art	Beschreibung
Extension	CAMT-Import: checking for missing debtors
XMID-2055	When linking the CAMT entries to the respective orders, it may happen that customers do not have a debtor number. This can have various reasons. In the future, a link to the respective customer profile will be displayed in such cases so that you can examine the corresponding profile and make changes if necessary.
Bugfix	Creating tickets out of the IATA/BSP-Import
XMID-2071	Similar to the order, double-clicking the "creation of ticket" button during the IATA/BSP import could result in tickets being created twice. In the future, the button will be locked after the first click until the process is completed in the background.

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
