1. General

description
<p>Extension: Refactoring of placeholders</p> <p>The placeholders in several areas have been technically refactored. This refactoring is necessary to ensure the further development of the placeholders in the future.</p> <p>No changes are planned at the functional level, so no change in behaviour should be noticeable on the surface. Nevertheless, it is recommended that the affected content be checked to ensure that texts continue to be generated as usual.</p> <p>Placeholders from the following areas are affected: email texts, text modules, postmaster.</p> <p>This includes both texts within email templates and text modules used in documents.</p>
<p>Extension: New PayPal interface available</p> <p>A new interface to the payment provider PayPal is now available. This means that trips can now also be conveniently paid for via an existing PayPal account.</p> <p>As usual, there is the option of automatic down payment and final payment – this function can now also be used via PayPal. In addition, a new placeholder has been introduced, which allows PayPal to be offered to customers as a link option.</p> <p>If you are interested in using this payment function, please contact our support team.</p>
<p>Extension: optimised Excel export</p> <p>The function for exporting in Excel format has been replaced by a new method. This makes manual export of files in Excel format significantly faster.</p> <p>We recommend checking your usual Excel lists.</p>
<p>Extension: AmadeusBIRT – Type of catering</p> <p>The import now also takes into account the meal type provided for AmadeusBIRT.</p>

Bug: automatic import

Since December, an error message stating 'service not found' has been appearing during automatic import into the inbox for initial transfers. This error has now been fixed. No error task/note will be generated for new initial transfers.

Extension: advanced booking search > journal

The journal section in the advanced booking search has been optimised so that sorting, filtering and searching now produce faster results.

2. Administration

description

Bug: incorrect heading under services > price line text

An incorrect heading was stored in the table in the 'price line text' tab. This has been corrected and now contains the heading 'price line text' again.

3. Order

description
<p>Extension: documents in the order and customer profile</p> <p>The view in the 'documents' section of the order and customer profile has been slightly adapted.</p> <p>As soon as one of the tabs contains documents, the corresponding number is also displayed in brackets.</p> 

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
