# 1. General

Description
<p><b>Extension: AmadeusBIRT interface</b></p> <p>We can now receive BIRT files via Amadeus for package tours. Further services will follow. If you would like to set up the interface, please contact our support via the Service Desk. There is a charge for setting up the interface.</p>
<p><b>Extension: booking search &gt; cashbook</b></p> <p>The cash book section in the advanced booking search has been optimised so that sorting, filtering and searching yield faster results.</p>

# 2. Order

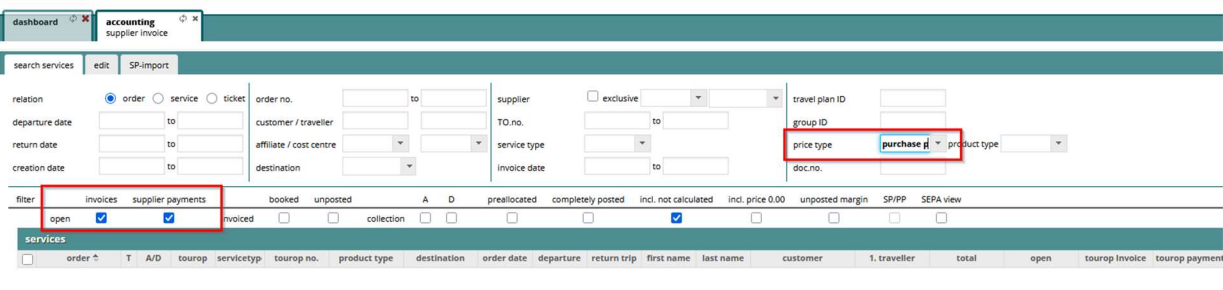

Description
<p><b>Bug: Manual printing of complex vouchers</b></p> <p>If the company option 'voucher only if document status is active and open' is active, when printing travel documents manually, the system only checks whether a template exists for 'active' services. Services with grey document status are ignored. This means that misleading error messages are no longer displayed for these services.</p>
 <p>The screenshot shows the 'administration settings' interface. A sidebar on the left lists various settings categories, with 'print settings' selected. The main content area is titled 'print settings' and contains several configuration options with checkboxes:</p> <ul style="list-style-type: none"> <li>save text module at print <input type="checkbox"/></li> <li>print voucher for pp supplier <input type="checkbox"/></li> <li><b>voucher only if document status is active and open <input checked="" type="checkbox"/></b></li> <li>manual voucher printing at status done <input checked="" type="checkbox"/></li> </ul>

### 3. Accounting

**Description**

**Bug: supplier invoice filter function in combination with the 'purchase price' filter**

The <open invoices> and <open supplier payments> filters in the supplier invoice no longer worked for the <purchase price> filter type. The filters can now also be applied to purchase prices.

### Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
