1. General

description
<p>extension: xMid Dashboard > Inbox: new cron job</p> <p>A cron job has been set up for the xMid Dashboard > Inbox. Starting October 1st, 2025, all entries in the “imported/ignored” area where the DEPARTURE DATE is older than 2 years will be automatically deleted on a monthly basis (always on the 1st of the month)</p>
<p>extension: xSign function using xArc</p> <p>The areas for xSign and xArc have been expanded. It is now also possible to use archived documents for the xSign function and to obtain signatures for these documents. Detailed information on using xSign can be found in the manual (Administration > Manual) under section 1.3 xSign.</p> <p>(LINK: https://wiki.xmid.de/doku.php?id=root:xmid:1allgemein:1.3_xsign).</p> <p>The support team is available at any time to answer any questions you may have.</p>
<p>extension: Passolution > Displaying the link</p> <p>There has been an extension in the use of the Passolution link. A label (passolution[link_text]) has been added under Administration > Translation. An individual name for the link can be stored in the columns for the languages. Instead of the “cryptic” link, the name stored in the translation for the link is now displayed on the documents and in the texts. Clicking on this name takes you to the Passolution page as usual.</p> <p>Please also note the instructions for using Passolution in the manual.</p>

2. Administration

description
<p>extension: e-mail accounts with Microsoft OAuth</p> <p>An enhancement has been made to the management of email accounts in employee profiles.</p> <p>On the one hand, it is possible to create multiple OAuth accounts in an employee profile one after the other, and on the other hand, private email accounts can also be stored and used.</p>

3. Order

description
<p>bugfix: export of order grid (list)</p> <p>Lists can be exported or generated as PDF files using the extended order list. The payment method column can also be activated in the results grid in the “Select columns” area. This information is now also available again in the export.</p>
<p>extension: supplier e-mails relating to affiliates</p> <p>In the area for supplier-emails (administration - common Rules - validation rules - LT mails), it is now possible to store these on an affiliate-specific basis. A new drop-down field for linking to a specific affiliate has been added between the “supplier” and “user” options. The drop-down contains a list of all affiliates created in xMid. The option is not mandatory. If nothing is selected, it automatically applies to all affiliates.</p>

4. Accounting

description
<p>bugfix: manual posting – not on tax accounts</p> <p>In the accounting - manual posting area, it is not permitted to post directly to tax accounts. Doing so could result in serious evaluation errors.</p> <p>From now on, the familiar error message will also be displayed for the “SMA” (split postings) action as soon as an attempt is made to enter a tax account.</p> <p>This helps to prevent accounting errors.</p>

5. Reporting

description
<p>extension: reporting > statistics</p> <p>The statistic type “price text” was previously designed for a minimum of three characters for the price text. This has been adjusted. Now, price texts can be entered with a minimum of two characters, and different price texts can be entered separated by commas and spaces for evaluation.</p>

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
