1. In General

Typ	Description
Extension XMID-1702	NEO-Import: transfer from date of birth For the NEO import, the birth dates of the individual participants are now also taken over if they are available in the delivery.
Extension XMID-1828 XMID-1833	New 3-LetterCodes The following 3-Letter-Codes were added: LLV (Lvliang Dawu Airport), RIH (Scarlett Martinez International Airport), EHU (Ezhou Huahu Airport) and WDS (Shiyan Wudangshan Airport). These are available for use immediately.
Bugfix XMID-1820	Adjustment of 3LC „NQZ“ For the NQZ airport, the name of the city was changed from "Nursultan" to "Astana".
Extension XMID-1540	Administration: View of group rights Under administration > settings > rights groups, the view of the rights to be set has been adjusted. The rights are now all displayed and can be visibly selected or deselected. 
Extension XMID-1758	Archive option (simple archiving): Document cache also for customers without a connected archive: The document cache can also be used by customers without a connection to a certified archive, such as that of Travelbasys. In this area, PDF receipts can be uploaded, which can then be linked to the posting record in manual posting or in the predefined postings. After successful posting, the receipt/document is linked in the account sheet. This means that documents can be easily accessed for posting records. An additional advantage of archiving is that documents can be made available to third parties for processing or checking without having to physically send the documents. This simple archiving does not replace audit-proof storage of the documents. This means that the documents must continue to be stored in accordance with the legal

requirements. If you are interested, please contact our sales department or our office.

2. Order

Art	Beschreibung
Bugfix	Copying orders with service groups
XMID-1797	It is now possible again to copy a service group when copying an order. If an order with a service group is copied, this group will also be copied to the duplicated order.

3. Accounting

Art	Beschreibung
Extension XMID-1623	<p>Accounting – SPI: Credit-side payment run</p> <p>With the credit-side payment run, the due dates for service provider invoices can be stored in Supplier Accounting and an SEPA file can be created for all due service provider payments. A detailed explanation of the credit-side payment run can be found in the manual under the following link: HandbuchKreditorischerZahllauf</p>
Extension XMID-1761	<p>Accounting – SP-Import: Display of options and requests</p> <p>In the SP-import of TUI, requests and options were not displayed and could be imported like orders with the status "Booking". From now on, a note appears that the status of the service must be changed when requests or options are imported.</p>
