# 1. General

description
<p><b>extension: Customer app xVoy</b></p> <p>Access data for xVoy can now also be sent from an OAuth2 authentication account.</p>
<p><b>extension: Bilingual data maintenance and display of fee price rules in the order</b></p> <p>The name of the fee price rules (administration &gt; Price rules &gt; Fees) was previously only displayed in the orders for users with the user language "de" (German). All designations can now be maintained in two languages (German and English). It then no longer displays the name of the fee price rule in the order as "-" for users with user language "en" (English)</p>
<p><b>extension: Galileo - Import of EXCH tickets</b></p> <p>The import for Exchange tickets has been adjusted so that correctly calculated amounts are displayed as fare.</p>
<p><b>extension: Sabre - Import of airline fees</b></p> <p>If airline fees are sent by Sabre in a PNR (in the MA element), this fee per ticket is added to the tax price line</p>
<p><b>extension: Placeholders in an LT mail</b></p> <p>In some cases, the placeholders {hotel details} and {flight details} were not filled in a mail to a supplier for a cancellation. The logic of the application has been changed and the placeholders are filled with the data, regardless of the "Cancellation" status of the service.</p>

# 2. Order

description
<p><b>bugfix: Copying package services</b></p> <p>If a service of the type package tour "PA" was copied, the details of the flight service were not copied and remained empty. This has been fixed and all details of the service are copied.</p>

## 5. xTour

description
<b>extension: Checking the age of children</b>  When entering children's prices in xTour, the system now checks that the age of children in the room price and board matches. If it does not match, saving is no longer possible. The age must be adjusted in order to be able to enter the prices.

## Legende

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
