1. General

description
<p>extension: better Performance</p> <p>In many areas in xMid, sales are displayed by the customer. The calculation of these sales has been improved in the background or or expanded in areas where this calculation does not even need to take place. As a result, some displays and queries have been optimized and the speed has been slightly improved.</p>
<p>extension: Sender name for sepa file mails</p> <p>The sender of the sepa file mails corresponds to the sender name from the employee profile. If no name is set there, the first name and surname of the employee who sends the LSV announcement mail is taken from the extended order search - Payment control - Grid direct debit.</p> <p>The other areas function as before (manual mail dispatch in the order/customer profile, automatic mail dispatch)</p>
<p>extension: New 3LCs and renaming of an airline</p> <ul style="list-style-type: none"> - Two 3LCs for Chişinău International Airport: as the 3LC for Chişinău International Airport will change from mid-January, we have added the new code: RMO. To avoid errors with old bookings, we have left the old 3LC: KIV in the system - the airline American Transair has been renamed Air Anka (TZ) - the station "Graz Railway Station" was created with the code GGZ - the station "Turku Bus Station" was created with the code XTZ

2. xTour

description
<p>Extension: Prioritization of stop sales</p> <p>Stop sales were not prioritized in connection with the "Release" checkbox. This has been changed and a stop sale is now always considered first when a BA is made. If it is set, the request is rejected.</p>

3. Accounting

description

extension: Logic change for posting purchase prices

If the import lines of the IATA/BSP import are posted to the purchase price, they were controlled to the supplier of the service price. This has been changed so that the import line is posted to the desired purchase price with the corresponding service provider of the purchase price.

Legende

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice. Bugfix = Fixing of errors
