description
<p>extension: Change for flight imports</p> <p>If flight tickets were imported from the inbox, a check of the ticket number and PNR was carried out to determine whether the ticket already existed. The check has been changed as this often led to duplicate ticket numbers in xMid.</p> <p>The check is now no longer based on the PNR, but on the date of issue of the ticket. This should prevent the import of duplicate tickets in future.</p>
<p>extension: Sabre Vacation</p> <p>Due to the changeover from Shop Holidays to Sabre Vacation, logging in via the icon no longer works.</p> <p>The old interface is no longer supported by Sabre. We have inserted a link to the Sabre Vacation page here.</p> <p>Please log in there with your access data (Sabre usually saves the data so that from now on the correct mask will continue to appear when you open it via the sun).</p> <p>Please also note the information from Sabre in their newsletter on the subject of the changeover. Sabre has created a checklist, which was also included in the Sabre newsletter:</p> <p>(https://visit.sabre.com/l/687693/2023-09-19/27kw11/687693/1696000325WKOngA0g/Sabre_Vacations_Migration_Checklist_DE__1_.pdf)</p>

Legend
