

Release Notes

xMid Version 24.11

Content

1. xTour	2
2. Administration.....	2
3. Order.....	3
Legend.....	3

1. xTour

Description
Extension: hotel export to xRes
The xTour hotel export to xRes has been adjusted. Now only hotels with the status "active" and a hotel code are exported. If no code has been assigned, the hotel will not be included in the export. Hotels without a code can still be booked internally in xMid orders..

2. Administration

Description
Bugfix: textmodules
An error has been fixed for text modules in different customer languages that are created with "display automatically". The reference to the respective language from the customer profile is missing here. This has been restored so that text modules with "display automatically" can access the language from the customer profile again and are displayed and printed correctly.

3. Order

Description
<p>Bugfix: printing vouchers – customer language</p> <p>An error has been fixed for printing complex vouchers. Labels from the Administration > Translations area were not consistently used when printing if the customer language was not German. The functionality has been restored.</p>
<p>Bugfix: email to supplier > placeholder</p> <p>The placeholder {EK Preis} (Purchase Price) in the email to a supplier now also takes into account foreign currencies in the order. When sending the respective service to the supplier, the purchase price is displayed both in system currency or, if applicable, now also in foreign currency.</p>
<p>Extension: predefined priceline texts in customer language</p> <p>For invoices from foreign-language customers, predefined price line texts and labels were displayed in the user's language and not in the customer's language. From now on, these will be used in the corresponding customer language.</p>

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
