

Release Notes

xMid Version 25.03

Contents

1. General.....	2
2. Accounting	3
Legend	3

1. General

description
<p>extension: Optimization of the results list (grid) for agency commission</p> <p>The agency commission grid (extended order search - agency commission) has been optimized. This affects the export, sorting and search in the list.</p>
<p>extension: adding customer profiles via import - country codes extended</p> <p>Some CRSs supply customer data with a single-digit country code (e.g. A instead of AT). We have extended the import so that the single-digit country abbreviations can also be correctly assigned to the countries. We now recognize the abbreviations: B - Brazil, D - Germany, E - Spain, F - France, G - Great Britain, I - Italy, J - Japan, S - Sweden</p>
<p>extension: interface Traffics</p> <p>The service type “K” for cruises (SC = ship in xMid) has been added to the import of the Traffics interface so that files with this service type can be successfully imported from the inbox in future</p>
<p>extension: interface NXT</p> <p>If we have 3ds information about a credit card payment, we send this to NXT/cyper-source during the automatic payment processes.</p> <p>This increases the security of credit card transactions. The 3ds information is supplied from xRes, for example, and stored in the background</p>

2. Accounting

description
<p>extension: additional BSP-Codes</p> <p>The BSP-code 384 has been added for KAM Air (RQ). The BSP-code 720 has been added for Qazaq Air (IQ).</p>
<p>extension: Datev-export for foreign currencies</p> <p>If the Datev export contained foreign currency amounts, these were exported in the wrong column. This has been corrected so that foreign currency amounts are now correctly imported into Datev.</p>

Legend

Extension = Software extension, new function may be associated with additional costs. Please contact your support if you are interested, we will be happy to help you with advice.

Bugfix = Fixing of errors
